

Nanopave™ Nx 1490

Cationic SBR latex for Microsurfacing Emulsion production to enhance strength, durability & long-lasting road.

Nanopave™ Nx 1490

Nanopave™ is green innovation product of Nanotech Industries and it is used as enhancement of strength in slurry mix or microsurfacing emulsion. Nanopave™ can be added in soap phase (45-60 °C) (Pre addition) or directly in emulsion (post addition).

Advantages:

- Build high cohesion and adhesion strength,
- Build strength,
- Increase coverage and coating on aggregate,
- Compatible with emulsion PH level pre and post addition compatible,
- Improved high softening point to work at elevated temperature,
- Improve elastic recovery to impart lateral strength,
- Work as antioxidant for the slurry surface so enhance road life,
